

ABSTRACT OF THE DISCLOSURE

The method for establishing a coordination link (40) between a first and second control centre (10, 12) for carrying out services, including a stage in which one of the centres (10) transmits its address to the other centre (12) by inserting the address in a call control signal transmitted to the other centre (12), and a stage in which the centre (12) which has received the address inserted into a call control signal establishes the coordination link (40) in order to transport the call control signal used in order to transmit the address of one of the centres to the other centre.
